Those who own, live on, and manage small-acreage properties are responsible for a variety of natural resources, including soil, water, air, plants, and animals. It is important to manage these resources sustainably to ensure the land remains healthy, productive, ecologically diverse, and preserved for future generations.

By participating in this program, you will have the opportunity to:

- Develop goals for your property, and learn about the dynamic relationships between soil, water, air, plants, and animals.
- Learn the fundamental properties of soils, including fertility and texture.
- Understand water quality, become familiar with the major laws protecting our water, and learn how to protect your water resources.
  - Learn to identify, prevent, and manage weeds on your property.
  - Learn about attracting wildlife and understand deterrent tools.
  - Develop an emergency plan for your livestock, and property.

This program offers online training to help you understand the fundamentals of sustainable land and resource management.
