Additional notes:

These management action points represent locations on the ground where if the fire reaches that line, the Incident Management Team needs to notify and coordinate with the appropriate local authorities on preparing for possible changes to evacuation status. **LOFRs will notify AAs followed by county officials to begin coordination.**

If the fire crosses the Dolores Montezuma County line, the Incident Management Team needs to notify and coordinate with the appropriate local authorities.

The fire reaching any of these lines **does not necessitate an immediate evacuation or change in evacuation status.** Additional considerations include fire behavior, forecast weather, and expected fire growth. Additionally public safety, social and economic concerns should inform the decision. Any decision to evacuate is at the discretion and authority of the local responsible official.

If the fire establishes in upper Priest Gulch or in lower Stoner Creek, a courtesy call should be made to appropriate Sheriff/EM, for awareness, not necessarily changes to evacuation status.

Evacuation zone polygons are for evacuation reference only. Breach of these lines does not trigger action or notifications.
